Bluetooth®

STREAMING AUDIO AND HANDS-FREE PHONE

The JCV2015BT stereo features three Bluetooth protocols that work together to eliminate the need for a driver to have physical contact with their phone, keeping them DOT compliant at all times. They can wirelessly stream music, control their device's audio through the stereo once streaming, and make and/or receive hands-free calls using our Bluetooth microphone all while their phone is completely out of reach.

STEERING WHEEL CONTROLS

Audio adjustments can be made directly from existing steering wheel controls. If your truck is already equipped with factory steering wheel audio controls, your driver maintains all of the safety benefits that these controls were designed for.

The power of Safety and Affordability

from one convenient source.

SLEEPER-CABIN REMOTE CONTROL

This model is fully compatible with factory audio controls located in the sleeper of the truck. Drivers can still enjoy the benefits of their stereo while relaxing.

ON-BOARD COMPUTER INTEGRATION

By giving the OBC a dedicated source input initiated via existing trigger leads, the JCV2015BT stereo automatically mutes all other audio when receiving an incoming message. Now, drivers can hear the message clearly the first time, reducing the need to replay missed messages, keeping their attention on the road.
