Start Capacitor

*An Extra Boost of Power*

The Advent Start Capacitor provides that extra boost of power sometimes needed for a rooftop A/C unit. An Advent start capacitor should be added to every Advent A/C and/or Heat Pump unit that a dealer installs. It is quite common for generators and even shore power grids to be less than adequate in regards to the start-up amperage. Adding a start capacitor is an easy sell and provides dealers with another profit center and more importantly a happy customer since their A/C will start-up every time regardless of the available power!

#### KEY FEATURES:

- Installs in minutes
- Compatible only with Advent Air products
