

STC300

Spa Commander

The JENSEN Marine Topside Spa Commander is the newest audio control solution to hit the Spa industry. Engineered to be in an undercover environment, the STC300 can be conveniently operated at the topside of the spa. This commander interfaces with the JENSEN JMS22TA full function stereo, which is mounted under the skirt away from any water. The STC300 also has the durability needed to handle the harsh elements encountered in a spa environment such as continuous heat, humidity, condensation, harsh chemicals and temperature changes.
