

Take the scenic route.

Every time.

Mobile observation has finally come full circle with the SEE360 camera system from Voyager. This four-camera system gives you a seamless, 360° panoramic view around the entire vehicle. Because each individual camera offers an

SYSTEM

unprecedented 190° wide angle view, the SEE360 provides increased awareness on the busiest city streets. Keep your passengers and pedestrians safe while you maneuver your vehicle with confidence.

A seamless, panoramic view around your entire vehicle.

Voyager® REAR SENSOR SYSTEM

—[CVRPS14]—

BACKUP SENSORS

This system includes four sensors that are spaced evenly along the back of the vehicle to provide an accurate reading of the surrounding areas along with range of vision on the front monitor.

SIGNAL WARNING ZONES

Displaying three color warning zones, each representing three feet of depth, the sensor(s) will first alert the driver when an object is within nine-feet of the rear of the vehicle. As the vehicle gets progressively closer to the object, the corresponding warning zone will display its color.

VISUAL/AUDIBLE ALERTS

When used with a compatible monitor, this system gives both audible and visual notifications when it detects an object within range. The audible warning gets progressively louder as the vehicle gets closer to objects.

Drivers can select their preferred tone and screen graphics on a compatible Voyager® monitor or JENSEN® stereo.
